

### ■ Double-Barreled Displays For The Visually Greedy

When one monitor just isn't enough, why clutter your desktop with two? **DoubleSight** Displays just released side-by-side 15-inch LCD screens that sit on a single desktop stand and use one power cord but deliver two views from a variety of sources. The model DS-1500 lets users distribute the super-wide 2,048- x 768-pixel display real estate in a number of ways. Dual video cables can accommodate feeds from two PCs, a single PC with dual output, or a single PC signal, which the DS-1500's onboard technology can replicate to show two views on the same Windows Desktop. This "Smart Control" technology even lets a user stretch a window, such as an extra-wide spreadsheet, across the total viewable area of 24 x 9 inches. These LCDs boast a 400:1 contrast ratio, a 130-degree horizontal and 100-degree vertical viewing angle, and 25ms response time for \$799 at [www.doublesight.com](http://www.doublesight.com).
